PROFESSIONAL SUMMARY

Full-Stack Software Developer with a BSc in Computer Science from Haramaya University (2025) and hands-on experience building and deploying production web systems for research, commercial, and community clients. Independently designed and shipped the Ethiopian Research Analytics Platform, a live system built with Django REST Framework, React, and PostgreSQL that tracks researcher profiles, institution rankings, and publication trends using data collected from OpenAlex. Comfortable across the stack, from REST API design and relational database modeling to containerized deployment with Docker, Gunicorn, and Nginx on Oracle Cloud infrastructure. Delivered a commercial e-commerce platform for a Merkato-based phone accessories business and a volunteer website for a community organization in Canberra, Australia, working directly with non-technical stakeholders to translate real-world requirements into working software. and is currently deepening expertise both Back-end and Front-end design and production deployment workflows. Seeking a full-stack or backend-focused engineering role where practical project experience and independent problem-solving can contribute to a growing development team.

EDUCATION

Bachelor of Science in Computer Science 2025
Haramaya University, Haramaya, Ethiopia

Relevant Coursework: Data Structures and Algorithms, Database Systems, Software Engineering, Web Application Development, Artificial Intelligence, Object-Oriented Programming, System Analysis and Design.

EXPERIENCE

Software Development Intern — *Project Management System (PMS), Center for Digital Health Implementation Science (CDHIS)* Jun 2024 – Sep 2024

- Built responsive frontend components with React and Tailwind CSS for a project management system used to coordinate task assignment and team tracking workflows.
- Configured backend features in Django, including REST API endpoints, authentication, and data management logic, in collaboration with a small development team.
- Executed system testing and feature validation cycles, identifying and documenting bugs and user requirement gaps to support release readiness.
- Maintained version-controlled codebase using Git and GitHub, contributing to consistent development and review practices across the team.

Full-Stack Developer — *Freelance / Client Projects* Jun 2024 – Present

- Delivered a full e-commerce platform (msglcd.com) for a Merkato-based phone accessories retailer, building product management, shopping cart, and order management features with PHP, Laravel, and MySQL.
- Built a production-ready MERN authentication boilerplate with JWT, Google OAuth, and OTP email verification to support secure user registration and account management.
- Worked directly with a non-technical client to gather requirements and iterate on UI/UX based on user testing feedback, adjusting design and workflow to fit real customer behavior.
- Designed and deployed a responsive UI/UX concept for an e-commerce shoe store using TypeScript and Tailwind CSS, covering the full browsing-to-checkout flow.

Full-Stack Developer — *Self-Employed — Publication Analytics Platform*(Ongoing personal/research-support project) Oct 2025 – Present

- Designed and built a PostgreSQL database and Django REST Framework backend to track researcher profiles, institution rankings, and publication history for the Ethiopian research community.

- Collected and cleaned publication data from the OpenAlex API using Python and Google Colab, structuring it into analytics-ready datasets covering publication trends and collaboration networks.
- Developed a React.js dashboard to visualize research performance indicators, including citation impact, researcher productivity, and institutional output.
- Deployed and maintained the full application stack (Docker, Gunicorn, Nginx) on an Oracle Cloud Ubuntu server, delivering a live, publicly accessible platform at 81.208.170.152.

Volunteer Web Developer — *Holy Trinity Ethiopian Orthodox Tewahedo Centre, Canberra, Australia* 2025

- Designed, built, and deployed a public website to share church services, events, and announcements with the local community.
- Supported the organization's formal registration as a community/non-government organization in Australia, contributing to its eligibility for a multicultural government grant.
- Managed hosting and deployment independently using cPanel, delivering a live production site still in active use.

MAJOR PROJECTS

Ethiopian Research Analytics Platform (Ongoing personal/research-support project) | Live: 81.208.170.152

- Full-stack research analytics system tracking researcher profiles, institution rankings, publication trends, and collaboration networks for the Ethiopian research community.
- Stack: Django REST Framework, React.js, PostgreSQL, Docker, Gunicorn, Nginx, Oracle Cloud, Python, Google Colab, OpenAlex API.

Misgie Phone LCD Store | Live: msglcd.com

- E-commerce platform for a Merkato-based phone LCD and accessories retailer, with product management, responsive user interface and order management.
- Stack: PHP, Laravel, MySQL, Bootstrap, JavaScript, cPanel hosting.

Holy Trinity Ethiopian Orthodox Tewahedo Centre | Live: holytrinitycanberra.org.au

- Volunteer community website built for a church in Canberra, Australia, to share services, events, and announcements.
- Stack: HTML, CSS, JavaScript, Bootstrap, cPanel hosting.

MERN Authentication System | GitHub: github.com/me-1219/mern-auth-system

- Production-ready authentication boilerplate with JWT, Google OAuth, and OTP email verification.
- Stack: MongoDB, Express.js, React, Node.js, JWT, OAuth, Nodemailer, bcrypt, Passport.js.

ShoesHub E-Commerce UI/UX | Live: <https://mulie-shoes.vercel.app/>

- Responsive e-commerce interface design covering Home, Product Listing, Product Details, Cart, and Checkout flows.
- Stack: TypeScript, Tailwind CSS, JavaScript, deployed on Vercel.

CERTIFICATIONS

- Data Analysis Fundamentals – Udacity – 2024
- Introduction to Cybersecurity – Simplilearn SkillUp – 2025

SKILLS

Industry / Technical Skills: Full-Stack Web Development, REST API Design, Relational & NoSQL Database Design, Authentication & Authorization (JWT, OAuth), Cloud Deployment, Data Collection & Preprocessing

Languages & Frameworks: JavaScript (ES6+), TypeScript, Python, React, Next.js, Django, Django REST Framework, Node.js, Express.js, PHP.

Databases: PostgreSQL, MySQL, MongoDB

Tools & Software: Docker, Git, GitHub, Oracle Cloud, Nginx, Gunicorn, Plesk, cPanel, Apache, Google Colab, Postman

Soft Skills: Requirements Gathering, Client Communication, Problem-Solving, Independent Project Ownership, Attention to Detail, Adaptability

LANGUAGES

Amharic: Native Proficiency

English: Professional Working Proficiency
