

Mebit Melak Gashaye

Full Stack Software Engineer

|| +251973921904 || melakmebit75@gmail.com || [Portfolio](#) || [Linkedin](#) || [Github](#)

Professional Summary

Full-Stack Software Engineer from Ethiopia with experience in designing, developing, and deploying web applications. Skilled in frontend and backend development, database management, REST API integration, and cloud deployment. Passionate about building efficient, scalable, and user-focused software solutions. A quick learner with strong problem-solving abilities, committed to continuous growth and delivering high-quality results in collaborative environments.

Education

Bachelor of Science in Computer Science

Haramaya University

Haramaya, Ethiopia

Graduated: 2025

Relevant Coursework: Data Structures and Algorithms, Database Systems, Software Engineering, Web Application Development, Artificial Intelligence, Object-Oriented Programming, System Analysis and Design.

Technical Skills

Frontend: React, TypeScript, JavaScript (ES6+), Next.js, Bootstrap, Tailwind CSS

Backend: Django, Node.js, Express.js, PHP/Laravel, REST API Development

Database: MySQL, PostgreSQL, MongoDB

DevOps & Deployment: Cloud Servers, Oracle Cloud, Docker, Plesk, Apache

Version Control & Tools: Git, GitHub

Work Experience

Software Development Intern

Project Management System (PMS) – Center for Digital Health Implementation Science (CDHIS)

June 2024 – September 2024

- Collaborated in developing a web-based Project Management System to improve task assignment, team collaboration, and project tracking workflows.

- Developed responsive frontend components using React and Tailwind CSS to create a clean and user-friendly interface.
- Assisted with backend development and configuration using Django, including API integration, authentication, and data management.
- Participated in system testing, feature validation, debugging, and documentation of user requirements.
- Worked with development tools and version control practices to support efficient software development.

Full-Stack Developer — *Freelance Projects*

June 2024 – Present

- Developed e-commerce web applications with product management, shopping cart, user authentication, and order management features.
- Built responsive frontend interfaces using React, Tailwind CSS, and modern JavaScript.
- Developed backend systems using PHP/Laravel/, Django, Node.js, and REST APIs with database integration.
- Implemented secure user authentication, API integration, and deployment workflows.
- Managed source code and project development using Git and GitHub.

Full-Stack Developer — *Self-Employed*

Ethiopian Research Analytics Platform

October 2025 – Present

- Developing a research analytics platform focused on improving visibility and analysis of Ethiopian research activities.
- Building researcher profiles, academic portfolios, and institution profiles with research performance insights.
- Creating analytics features for institution ranking, researcher ranking, publication trends, and research impact analysis.
- Supporting analysis of key research indicators including publication growth, research fields, collaboration networks, citation impact, and researcher productivity.
- Developing a system to track journals, publications, research history, and academic contributions.
- Providing data-driven insights to understand research performance, collaboration, and national research development trends.

Major Projects

Ethiopian Research Analytics Platform

- A research analytics platform designed to collect, organize, and analyze Ethiopian research data, publications, and academic contributions.
- Provides researcher profiles and portfolios to showcase publications, research history, and academic achievements.
- Enables comparison of researcher rankings and institution rankings based on research performance and research output.
- Analyzes publication trends, journal performance, research fields, collaboration networks, and citation impact.
- Provides research insights and analytics dashboards to support understanding of institutional performance and research development.

Technologies: React, Django, PostgreSQL, REST APIs, Docker, Oracle Cloud Deployment, Data Visualization, OpenAlex API, Google Colab.

Phone LCD Store Platform —[LCD](#)

- A full-featured e-commerce platform designed for selling phone LCDs and mobile accessories online.
- Includes product management, product listing, shopping cart, wishlist, and checkout functionality.
- Provides a user-friendly shopping experience with responsive design and easy product navigation.
- Implements database management for products, customers, and orders.

Technologies: PHP, MySQL, Bootstrap, JavaScript, Apache, SEO Optimization

E-Commerce Shoe Platform (UI/UX Design) —[shoes](#)

- Designed and developed a modern, responsive e-commerce interface focused on a smooth and intuitive shopping experience.
- Created user-friendly layouts for product browsing, product details, shopping cart, and customer interactions.
- Improved usability through clean UI design, responsive layouts, and optimized user experience across desktop and mobile devices.

Technologies: TypeScript, Tailwind CSS, UI/UX Design, Responsive Design

MERN Authentication System—[auth](#)

- Developed a full authentication system with secure user registration, login, and account management features.
- Implemented JWT-based authentication, Google OAuth integration, OTP email verification, and password reset functionality.
- Built a production-ready authentication boilerplate focused on secure user access and data protection.
- Integrated email services and authentication middleware to improve security and user experience.

Technologies: MongoDB, Express.js, React, Node.js, JWT, OAuth, Nodemailer, bcrypt, Passport.js

Certifications

- Data Analysis Fundamentals (*Udacity* | 2024)
- Introduction to Cybersecurity (*Simplilearn SkillUp* | 2025)

Languages

- Amharic: Native Proficiency
- English: Professional Working Proficiency
